

Clearspan

100' Wide Truss Arch Church

In areas with volatile wind and weather conditions, it is advisable to restrict width to 100'

100' wide units are the most cost effective pricing per square foot.

100'x400' = US \$ 606,000

Clearspan Truss Church buildings are the perfect setting for weekly services and events. This building offers incredible natural lighting, and the high ridge will allow for a significant reduction in ambient temperatures. On average, the buildings will stay 15-20 degrees cooler than the outside temperature.

Clearspan Truss Arch Church's can be fitted with lights, fans, heater, and anything needed to create a perfect environment. The cover material is a premium rip-stop Poly, with a long life expectancy (20-30 years) and a Fire Retardant, necessary for public buildings.

The 100' wide Clearspan Truss Arch Church is intended for high wind load rating (compliant w/local code) and is inclusive of end walls and anchoring.

Cost for the unit is \$15.15 per square foot (US). The structure can be built to any length.

Production schedule allows for 5 units per week.
